Diane,

See the attached from the PP file. It's an analysis of possible rate increases at PP if they would install ion exchange treatment to address nitrates at \$1.2M (per 2007 FS). Don't know if the costs are in the FS, or if Dave Waldo did the analysis, but he says that rates were at about \$19 without Nitrate treatment, and would increase to \$36-43 with treatment (2007 \$\$\$). He says that those rates are comparable to a couple of other small PWS rates in KS.

I also found discussion about looking for PRPs for the nitrate plume. No data included, just that they looked for PRPs, and didn't see anything major. I'm going to follow up on that with Darrel and perhaps talk with the BER.

Scott
